

Research Proposal

Title

Enhancing Digital Literacy Among Rural Students

Type

Research

Status

In Progress

Abstract

This study investigates the impact of digital literacy training programs in rural schools within the Zamboanga Peninsula. It aims to measure current skill levels, identify gaps, and propose strategies to improve access to technology and learning outcomes.

Objectives

- Assess baseline digital literacy among students and teachers.
- Implement targeted training modules.
- Evaluate improvements in performance and confidence.
- Recommend policies for sustainable integration of digital tools.

Methodology

- **Survey & Interviews:** Collect data from students and teachers.
- **Training Sessions:** Conduct workshops on essential digital skills.
- **Evaluation:** Pre- and post-assessment of participants.
- **Analysis:** Compare results and identify key success factors.

Expected Outcomes

- Improved student performance in digital tasks.
- Increased teacher confidence in using technology.
- Policy recommendations for education stakeholders.
